Hiring Team & Technical Leaders
Software Engineering, Web Application & Data Systems Roles
Remote / Hybrid Opportunities

Dear Hiring Team,

I am writing to express my strong enthusiasm for software engineering and web application developer opportunities with your organization. My passion centers on engineering robust full-stack applications, optimizing data infrastructure and analytics pipelines, and building low-latency developer utilities empowered by modern web and AI technologies.

As a Computer Science undergraduate at UPN "Veteran" Yogyakarta and an active international freelance engineer, I have built a solid track record across client-facing products and software systems. Recently, as a Contract Web Application Developer for Joe Coffee Company (New York, US), I managed and optimized their digital storefront-enhancing the customer online ordering flow, upgrading recurring coffee subscription systems, resolving technical bugs, and ensuring smooth mobile responsiveness across devices.

Concurrently, through my freelance practice on Fiverr, I have delivered remote data analytics and database administration for global clients (including Australia and Malaysia), translating complex datasets into actionable business dashboards and automating data cleaning and ETL pipelines across MongoDB, PostgreSQL, and MySQL. Furthermore, I built modern, responsive web applications for international clients with a steadfast emphasis on clean UI, performance speed, and SEO.

My technical curiosity is reflected in my recent open-source systems: NativeCopy-a high-speed cross-device developer utility enabling live remote code injection directly into active VS Code sessions alongside MediaPipe AI hand gesture tracking-and SPADA Auto-Presence, an autonomous university attendance engine powered by Playwright and Telegram bots deployed 24/7 on GitHub Actions.

I bring high energy, proactive asynchronous communication, and disciplined software craftsmanship. I welcome the opportunity to discuss how my web development, database administration, and problem-solving skills can contribute directly to your engineering goals.

Thank you for your time and consideration. You are welcome to explore my live projects via my GitHub and portfolio website.

Sincerely,

Muhammad Athalla Bagaskara
Full-Stack Web Developer & Data Engineer

MUHAMMAD ATHALLA BAGASKARA

Sleman, Yogyakarta, Indonesia * +62 895-296-20940 * iamathaalla@gmail.com
github.com/muhmdathalla * muhmdathalla.github.io/dev * linkedin.com/in/muhmdathallaa

PROFESSIONAL SUMMARY

Results-driven Computer Science undergraduate specializing in Full-Stack Web Development, Data Engineering, and Scalable Automation. Proven experience optimizing high-traffic e-commerce portals, managing database administration, and building reliable ETL pipelines for international clients across the US, Australia, and Southeast Asia. Passionate about AI-integrated developer tools.

TECHNICAL SKILLS & EXPERTISE

Languages:	Python, JavaScript, TypeScript, Java, C++, C#, SQL, PHP, Kotlin, C
Frontend:	React.js, Next.js, Tailwind CSS, Bootstrap, HTML5, CSS3, Responsive UI/UX
Backend & DB:	FastAPI, Node.js, Express.js, Laravel, PostgreSQL, MongoDB, MySQL, Data Pipelines / ETL
Tools & Infra:	Git, GitHub, Docker, Playwright, Linux, MediaPipe AI, SSE, Postman, Google Earth Engine

PROFESSIONAL EXPERIENCE

Contract Web Application Developer **Sep 2026 - Present**
Joe Coffee Company * New York, United States (Remote)
- Managed and optimized company e-commerce website to improve customer online ordering and recurring coffee subscription setup.
- Handled frontend layout updates, resolved technical bugs, and ensured smooth mobile responsiveness for the digital storefront.

Freelance Database Administration & Analytics **Sep 2026 - Present**
Fiverr * Australia (Remote)
- Delivered remote data analytics services to global clients; cleaned raw datasets, performed EDA, and built KPI dashboards to optimize storefront decisions.

Freelance Web Developer **May 2026 - Sep 2026**
Fiverr & JobStreet * Jakarta, Indonesia (Remote)
- Built responsive, modern portfolio and business web applications focused on clean UI, performance speed, and technical SEO.

Freelance Data Engineer (Data Infrastructure) **Jun 2026 - Aug 2026**
Fiverr * Malaysia (Remote)
- Designed and automated ETL workflows, data collection, and schema migration procedures across MySQL databases to ensure reliable data pipelines.

FEATURED TECHNICAL PROJECTS

NativeCopy - Cross-Device Live VS Code, File Injection & AI AirMotion Controller
Tech Stack: TypeScript, Python, FastAPI, MediaPipe AI Computer Vision, Server-Sent Events (SSE)
- High-speed developer tool enabling live typing into VS Code from mobile, direct project file injection, and code teleportation.
- Integrated MediaPipe AI hand gestures to navigate host OS mouse cursor without external hardware.

SPADA UPNYK Auto-Presence - University Attendance Automation Engine
Tech Stack: Python, Playwright, Telegram Bot API, GitHub Actions Cloud Cron
- Autonomous attendance bot for university portal (spada.upnyk.ac.id) with multi-course scheduling, verification screenshot delivery via Telegram Bot API, and 24/7 cloud cron execution via GitHub Actions workflows.

PerpusPintar - Smart Library Management System
Tech Stack: PHP, MySQL, Tailwind CSS, Full-Stack Architecture, Production Deployment
- Spearheaded development of a smart library system featuring digital access control, advanced database indexing, interactive search, and production server deployment.

Dutch Colony Singapore Commercial Portal
Tech Stack: React.js, UI/UX Engineering, Database Schema Optimization, Technical SEO
- Constructed responsive UI components and optimized database schemas to increase loading speeds and transaction flows for an international corporate client.

EDUCATION & CREDENTIALS

Universitas Pembangunan Nasional "Veteran" Yogyakarta **Jan 2024 - May 2028 (Expected)**
Bachelor of Technology (BTech) in Computer Science (Informatics) * Yogyakarta, Indonesia
Core Coursework: Data Structures & Algorithms, Database Management, Software Engineering, Networks.
Key Achievements: GEMASTIK XVIII 2025 Participant (Competitive Programming) * Google Developer Group Bootcamp.
Licenses & Certifications: HackerRank (SQL, Python, JavaScript, CSS, C#) * Dicoding Indonesia (C, Java Programming).
