Hiring Team
Software Engineering & AI Systems Roles
Remote / Hybrid

Dear Hiring Team,

I am writing to express my strong interest in software engineering and developer opportunities with your team. My passion lies in architecting reliable full-stack applications, streamlining end-to-end data pipelines, and bridging developer workflows with state-of-the-art AI and automation.

As a Computer Science undergraduate at UPN "Veteran" Yogyakarta and an active freelance engineer, I cultivate an agile "builder" mindset. Through my recent projects, I developed NativeCopy-an ultra-low latency cross-device developer tool enabling live code injection directly into active VS Code sessions alongside MediaPipe AI computer vision hand gestures-and SPADA Auto-Presence, an autonomous university attendance engine powered by Playwright and Telegram verification bots running 24/7 via GitHub Actions.

In my professional freelance work for global clients on Fiverr and Singaporean companies, I have designed production ETL pipelines across MongoDB, PostgreSQL, and MySQL, significantly reducing latency and data transformation overhead. Furthermore, my hands-on background with React.js, Next.js, FastAPI, and Docker has trained me to construct robust, high-performance web systems while taking complete ownership of projects in autonomous, asynchronous work environments.

I bring positive energy, proactive communication, and a genuine drive to turn complex challenges into polished, intuitive software. I would welcome the opportunity to discuss how my technical skills, engineering discipline, and enthusiasm can contribute to your products and goals.

Thank you for your time and consideration. You are welcome to explore my live demos and open-source code repositories via my GitHub and portfolio website.

Sincerely,

Muhammad Athalla Bagaskara

MUHAMMAD ATHALLA BAGASKARA

Sleman, Yogyakarta, Indonesia * +62 895-296-20940 * iamathaalla@gmail.com

PROFESSIONAL SUMMARY

Results-driven Computer Science undergraduate specializing in Full-Stack Web Development, Data Engineering, and Scalable Automation. Proven experience automating high-throughput ETL pipelines and optimizing database architectures for international clients. Passionate about integrating AI capabilities, building low-latency developer tools, and delivering high-performance software engineering value in dynamic, asynchronous environments.

SKILLS & EXPERTISE

Languages: Python, JavaScript, TypeScript, Java, C++, C#, SQL, PHP, Kotlin, C
Frontend: React.js, Next.js, Tailwind CSS, Bootstrap, HTML5, CSS3, Responsive UI/UX
Backend & DB: FastAPI, Node.js, Express.js, Laravel, PostgreSQL, MongoDB, MySQL, ETL Pipelines
Tools & Infra: Git, GitHub, Docker, Playwright, Linux, MediaPipe AI, SSE, Postman, Google Earth Engine

PROFESSIONAL EXPERIENCE

Freelance Data Engineer Fiverr (Global Clients) | Remote **Jun 2026 - Present**
- Designed and optimized end-to-end ETL pipelines for handling structured and unstructured business intelligence data.
- Architected cross-database migrations (MongoDB, PostgreSQL, MySQL) and automated cleaning, reducing latency.

Freelance Web Developer Fiverr & JobStreet Singapore | Remote **May 2026 - Jun 2026**
- Engineered responsive UI/UX and enterprise-grade web applications tailored to international corporate requirements.
- Optimized application architectures for mobile-first compatibility, performance speed, and comprehensive SEO.

TECHNICAL PROJECTS

NativeCopy (Live Remote VS Code, File Injection & AI AirMotion Controller) [TypeScript, Python, FastAPI, MediaPipe AI, SSE]
- High-speed developer tool enabling live typing into VS Code from mobile, direct project file injection, code teleportation, and MediaPipe AI computer vision hand gestures to navigate host OS mouse cursor without external hardware.

SPADA UPNYK Auto-Presence (University Attendance Automation Engine) [Python, Playwright, Telegram Bot, GitHub Actions]
- Autonomous attendance bot for university portal (spada.upnyk.ac.id) with multi-course scheduling, verification screenshot delivery via Telegram Bot API, and 24/7 cloud cron execution via GitHub Actions workflows.

PerpusPintas (Smart Library Management System) [PHP, MySQL, Tailwind CSS, Full-Stack]
- Spearheaded development of a smart library system featuring digital access control, advanced database indexing, interactive search, and production server deployment.

Dutch Colony Singapore Website [React.js, UI/UX, Performance Optimization, SEO]
- Constructed lightning-fast responsive UI components and maintained complex database schematics to improve loading speeds and optimize transaction flows for an international corporate client.

NDVI Magelang Satellite Data Analysis [JavaScript, Google Earth Engine, Geospatial GIS]
- Authored precise JavaScript programs in Google Earth Engine to process massive raster datasets, producing actionable vegetation index (NDVI) models and ecological land analysis.

EDUCATION & ACHIEVEMENTS

Universitas Pembangunan Nasional "Veteran" Yogyakarta **Jan 2024 - May 2028 (Expected)**
Bachelor of Technology (BTech) in Computer Science (Informatics)
Core Coursework: Data Structures & Algorithms, Database Management, Software Engineering, Networks.
Achievements: GEMASTIK XVIII 2025 Participant (Competitive Programming) * Google Developer Group Bootcamp.
